

Lab #2: Turtles

Download, unzip/extract, open turtles.zip

If you forget, [instructions on how to download, unzip/extract, rename, and open your Java project with VSCode are here](#)

Turtle documentation

All of the turtle methods [are listed here](#)

Do the assignment

There are three parts to this assignment, plus an optional 4th part.

Circle, CoolPattern, Spiral

These are example programs. Run them! Try making some changes.

Explain your most interesting changes in the Lab Report (Google Form available on Google Classroom).

Draw a Face or Flower

In the file `FaceOrFlower.java`, write Java code that draws a face. A face should have at least 4 features, such as eyes, nose, mouth, ears, eyebrows, beard, hair, etc. Be creative!

If you prefer, you can also draw a flower! A flower has at least 5 petals and a stem. Other than that, be creative! Have fun.

Draw a Stick Figure

In the file `StickFig.java`, write Java code that draws a stick figure. A stick figure should have a head, arms, legs, and a body. But it can also be wild and crazy in how you interpret those things. Have fun, be creative.

Draw a Vehicle or House

In the file `VehicleOrHouse.java`, write Java code that draws a vehicle of some kind. It can be a car, truck, bus, bike, spaceship, X-wing, Tardis, etc. Or make a scene out of several smaller ships. Be creative!

If you prefer, you can also draw a house! A house has at least one door, a roof, and at least one window. Be creative! Have fun.

(Extra Challenge) Draw an interesting pattern

Use what you have learned in CoolPattern.java and Spiral.java to experiment and create an interesting pattern of your own using for loops.

What to submit

- Zip your project folder and upload it to Google Classroom ([instructions on zipping are at the end of this video](#))
- Submit the Lab Report
- Mark your assignment as done on Google Classroom

Grading Rubric

- Lab report (10)
- Face or flower (30)
- Stick Figure (30)
- Vehicle or house (30)

- Bonus Pattern (+5)
Must use loops to receive credit.
- File named incorrectly (-5)
`lab02-KnoxUsername.zip` is the correct format for all submissions, and when unzipped the folder should be called `lab02-KnoxUsername`

Quick videos to help importing and running

On Windows, **make sure that your files are in the C: drive!** You may need to move them manually, as often the Downloads folder is on your network drive. If you can't run and you are seeing anything with `\\studentapps` in the error message, then your Downloads folder is on your network drive.

If you cannot run this project no matter what you do (should be very rare)

Let us know as soon as possible!
