**Part 1: For each code snippet below, describe the problem with the comment (if there is one). How would you change the comment(s) to fix the issue?**

**Code Snippet 1:**

```
// This is a for loop that goes through numbers from 0 to 4
for (int i = 0; i < 5; i++) {
    // Print the value of i to the console
    System.out.println(i);
}
```

**What is the issue?**

**Code Snippet 2:**

```
// Adjust value
int x = x + 10;
```

**What is the issue?**

Name:

Period:

### Code Snippet 3:

```
// Calculate the area of a rectangle using the formula: length * width  
int area = length * width;
```

**What is the issue?**

### Code Snippet 4:

```
// Check if x is even  
if (x % 2 == 0) {  
    System.out.println("x is odd");  
}
```

**What is the issue?**

### Code Snippet 5:

```
// We are declaring a variable called result that will store the sum of  
the numbers 10 and 20  
int result = 10 + 20;
```

**What is the issue?**

**Part 2: For the following problems, what comments would you add?**

**Use the line numbers to indicate where comments should go.**

```
1 public static int findMax(int[] numbers) {  
2     int maxValue = numbers[0];  
3     for (int num : numbers) {  
4         if (num > maxValue) {  
5             maxValue = num;  
6         }  
7     }  
8     return maxValue;  
9 }
```

```
1 public class NumberAnalyzer {  
2     public static void main(String[] args) {  
3         int number = 15;  
4         if (isEven(number)) {  
5             System.out.println(number + " is even.");  
6         } else {  
7             System.out.println(number + " is odd.");  
8         }  
9     }  
10    public static boolean isEven(int num) {  
11        return num % 2 == 0;  
12    }  
13 }
```
