

Knoxcraft / Minecraft Installation

If you don't own Minecraft but you know someone in your lab section who does, you can upload for them to run

You only need Minecraft to run the programs, not to write the Java code.

Use their minecraftPlayername in your code. Please check with them first that it's OK to upload your programs to their player to run.

If half the class can get Minecraft to connect, we should be fine. If it's $\frac{1}{3}$ of the class, we are probably OK. If it's only 3 people per lab section, we may struggle.

You need access to the Java edition

None of this will work with Minecraft for consoles like Xbox or Playstation, tablets or phones, or any other devices.

If you can run Minecraft on your laptop, you almost certainly have access to the Java edition.

You can buy the "Minecraft: Java & Bedrock Edition for PC" for about \$30.

If you have a Microsoft Xbox account, you can buy the Gamepass and get access to Minecraft. It costs \$9.99 per month, but there is currently a deal where you can get the first month for \$1, then cancel. <https://www.xbox.com/en-US/xbox-game-pass>

Here is help on what versions of Minecraft you own:

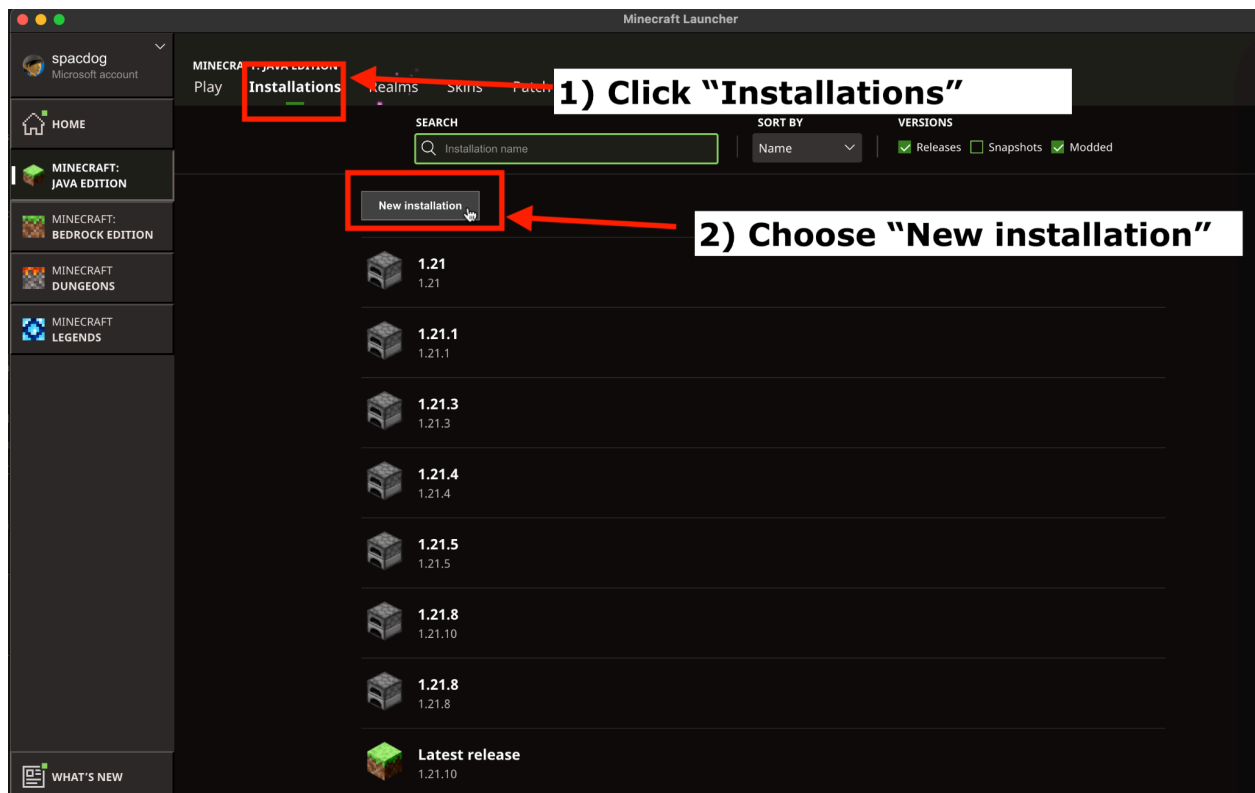

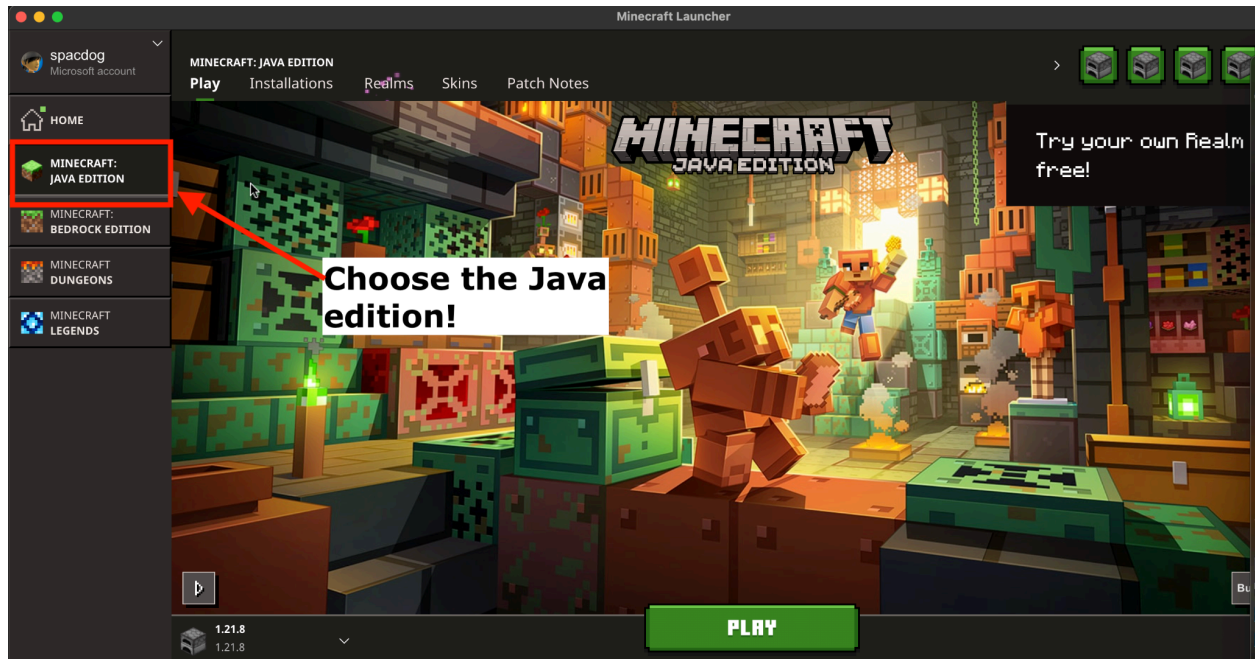

<https://help.minecraft.net/hc/en-us/articles/6657208607501-Find-Out-Which-PC-Editions-of-Minecraft-You-Own>

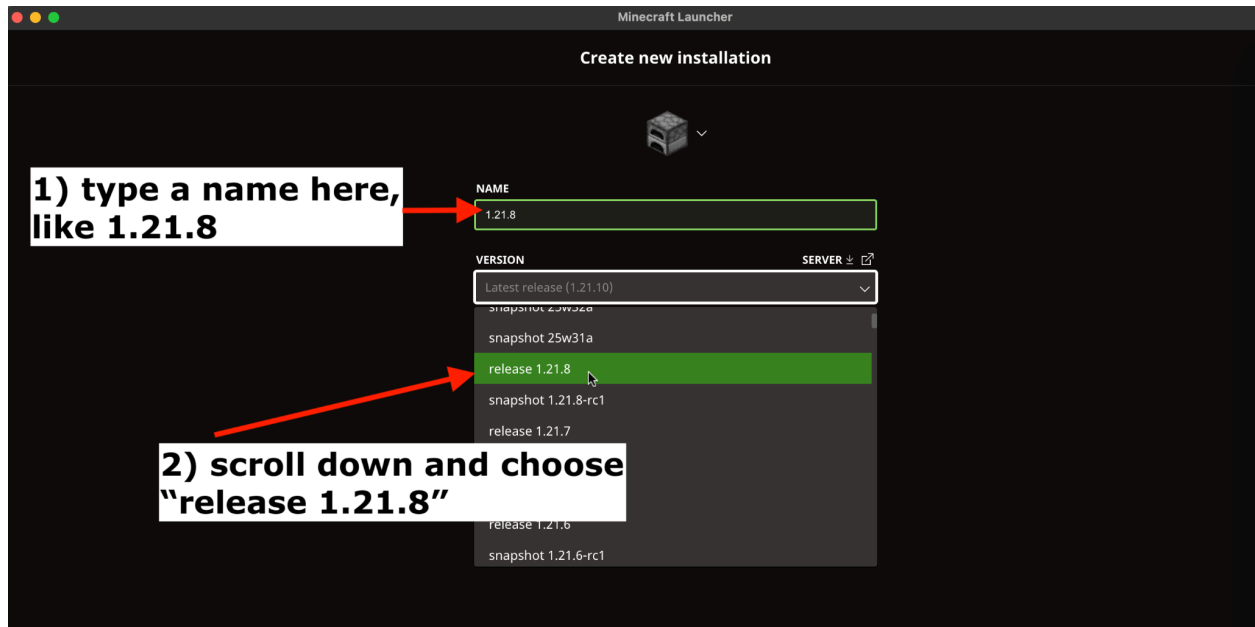

You must use Java Edition of Minecraft, version 1.21.8

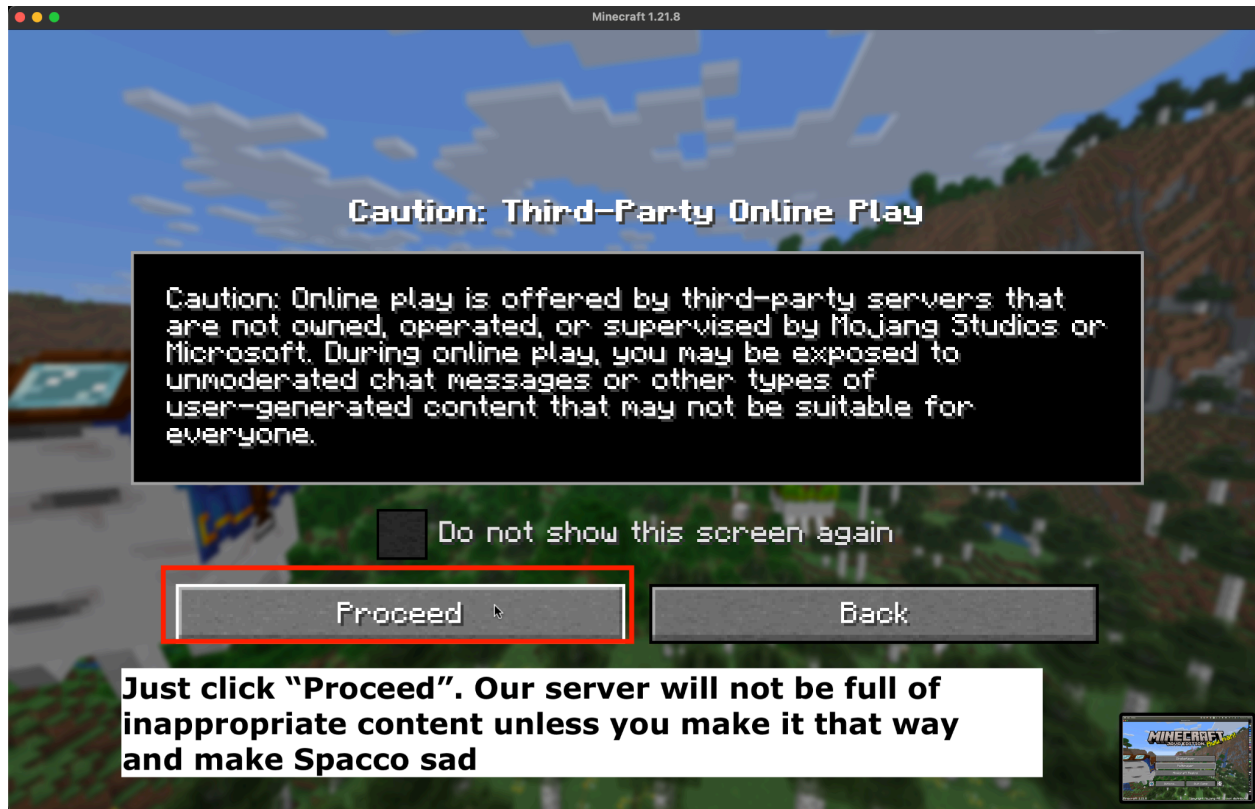

No other version will work

Download and run the Minecraft launcher

Here are screenshots of how to choose the Java Edition, create a 1.21.8 installation, and then connect to the server.

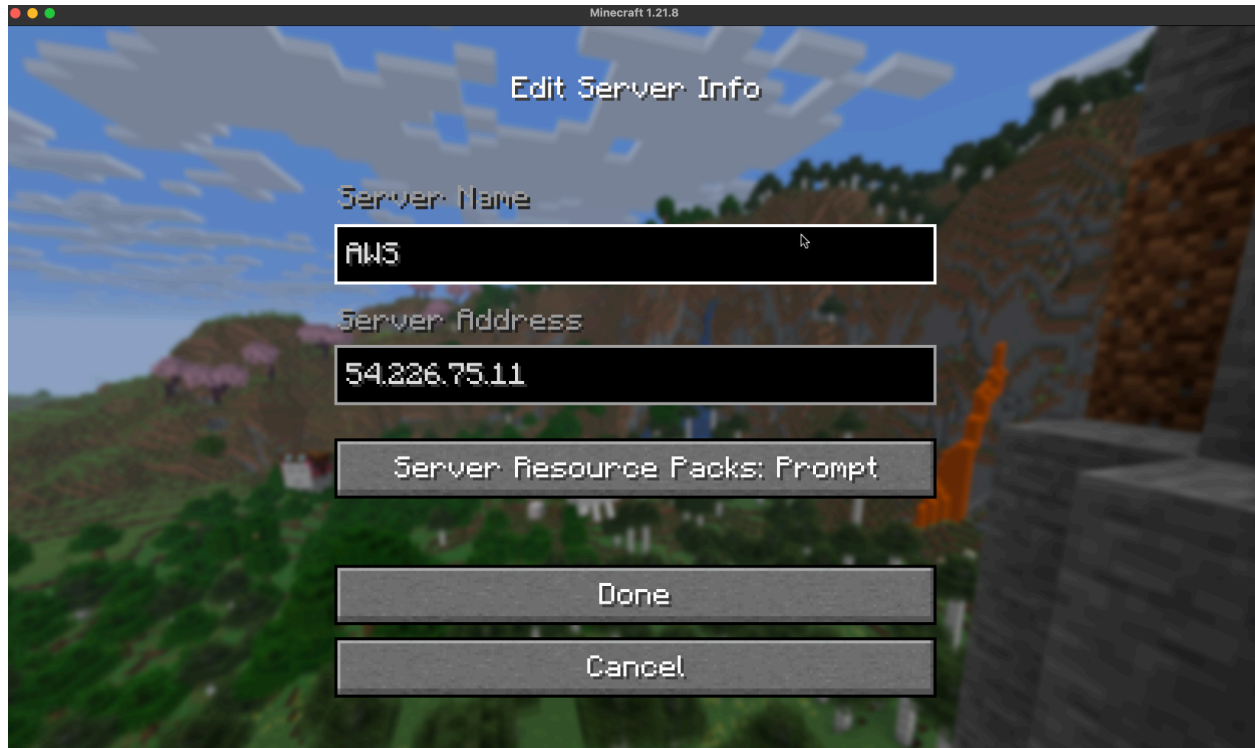

We put a big server up on AWS!

54.226.75.11

If you have a questionably legal Minecraft account (a “cracked” account), try our private server that is behind the Knox College firewall. I don’t want to encourage or enable violating Minecraft’s terms of service
