Create a Game with Event Handling in Greenfoot

Mode of Work: Individual or Group (Maximum 3 Members)

Objective

The purpose of this lab is to apply your knowledge of Java programming and event handling by designing and implementing a functional game in Greenfoot. This project will develop your skills in game design, user interaction, and teamwork.

Assignment Details

1. Design Your Own Game:

- Based on the sample code in Greenfoot, each individual/group will design their own game. The game must:
 - Have **interactive elements** that utilize event handling (e.g., keyboard input, and mouse clicks).
 - Include a **clear objective** (e.g., collecting items, defeating enemies, reaching a goal).

2. Event Handling Implementation:

- Integrate at least one type of event handling in your game (e.g., keyboard inputs for movement, and mouse clicks for actions).
- Document your event handling mechanisms clearly in your code with comments.

3. Presentation:

- Each individual/team will deliver a **5-minute presentation** in class from **December 1st**.
- The presentation must include:
 - A live demo of the game.
 - An explanation of how event handling is implemented and its role in the gameplay.
- Be prepared to answer questions from the class or instructor.

4. Source Code Submission:

- Submit your game's source code on Canvas. Every team member must individually submit the same code file on Canvas.
- Include a **README file** in your submission with:
 - A brief description of the game.

- Instructions on how to play the game.
- Any known bugs or limitations.

Submission Guidelines

Deadline for Source Code Submission: November 30th, 11:59 PM. Note: Firm deadline. No extension is allowed.

Format: Submit a **zipped folder** containing:

- Source code files.
- README file.
- Any additional assets required to run the game (e.g., images, sounds).

Evaluation Criteria

Criteria	Weightage
Creativity and Design	3%
Event Handling	10%
Functionality	15%
Code Documentation	5%
Presentation	15%

Group Guidelines

- Teams can have **1-3 members**.
- Clearly indicate the role of each team member in your README file.
- Ensure all members contribute equally to the project.

Resources

- [Greenfoot Documentation](https://www.greenfoot.org/door)  (<https://www.greenfoot.org/door>)
- Lecture slides on event handling.
- Sample Greenfoot code provided in class.

Note: No late submissions will be accepted. Plagiarism or copying from other sources will result in a score of zero for all members involved.

If you have any questions or need guidance, feel free to reach out during office hours or via email.

Good luck and have fun designing your game! 😊
